Career Objective

Seeking to apply my knowledge and skills in data analysis to help companies make informed and effective business decisions, while working in a professional environment.

Projects

Samsung Innovation Campus

Predicting low-quality products through customer comments and reviews on e-commerce platforms

May 2024 - Present

- Used commands to collect data directly on e-commerce websites.
- Optimized options for customers to find good products for themselves.
- Programmed in Python, deep learning, and machine learning to predict products using algorithms such as Convolutional Neural Networks, Decision Trees, Random Forests, SVM, etc.
- Analyzed customer sentiment to help them avoid buying low-quality products on e-commerce platforms like Shopee, Lazada, Tiki, etc.

Group Assignment

Developed a web design for an online movie streaming platform

June 2023 - July 2023

- Developed a web application for movies and entertainment using NodeJS, HTML5, CSS3, JavaScript.
- Designed a user-friendly, eye-catching interface with many features like games, music, and news.
- Focused on interface design, not working with databases. The product was part of a major web design exercise.
